

REPAIR HALL - HARLINGEN

DAMEN SHIPREPAIR & CONVERSION

DAMEN

Damen Shiprepair Harlingen (DSHI) has a state-of-the-art repair hall at its disposal. Directly connected to a synchro-lift, this permanently covered facility enables DSHI to work independent of weather conditions and daylight hours – all year round.

Quality

Because the repair hall is a fully controlled environment, work is performed to the highest levels of quality. It is especially suitable for blasting and painting activities on your vessels or other structures. It can, of course, also be used for many other types of work.

Safety

The fully illuminated and ventilated facility allows the DSHI team to work around the clock without any restrictions due to weather or daylight. This leads to the safest possible working practices.

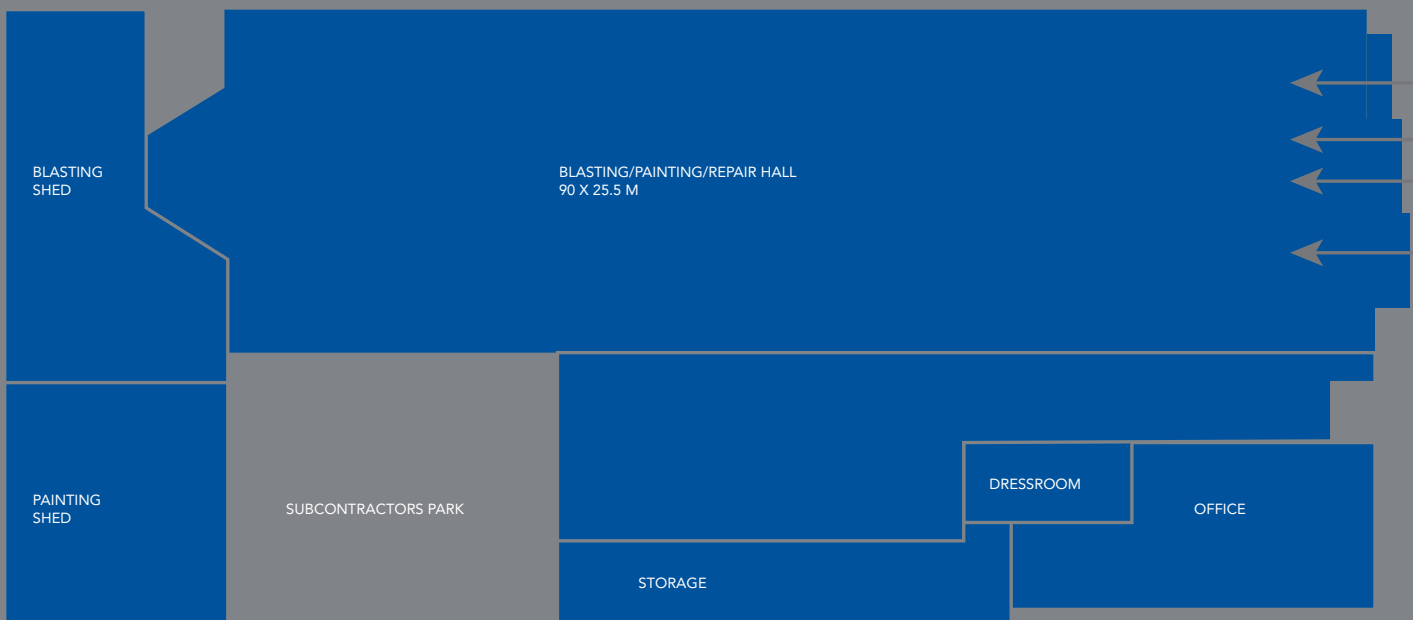

Specs

The dry dock can house vessels up to 90 metres long, just over 32 metres high (excluding cradles) and with a maximum displacement of 4,200 tonnes. A 20-tonne capacity overhead crane combined with a large access door (20 metres wide and 34 metres high), means that DSHI can install almost every type of equipment on your vessel.

As well as being completely covered, the area has extensive indoor facilities consisting of:

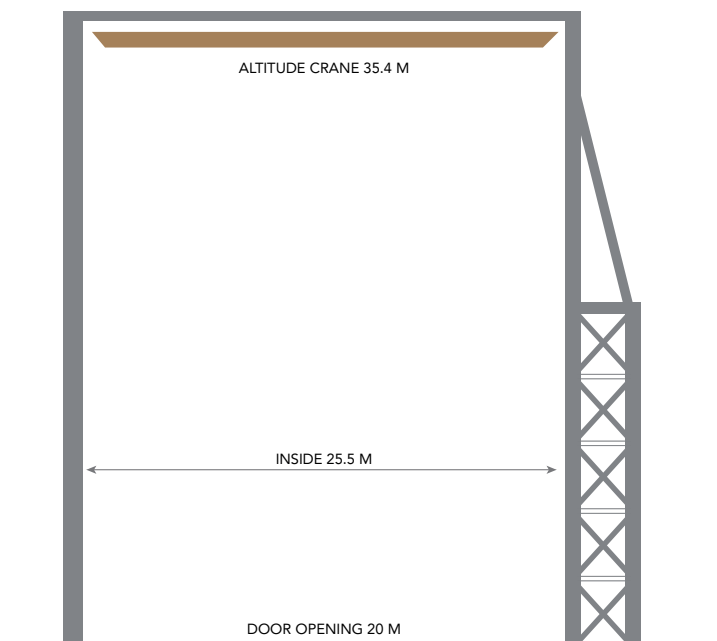

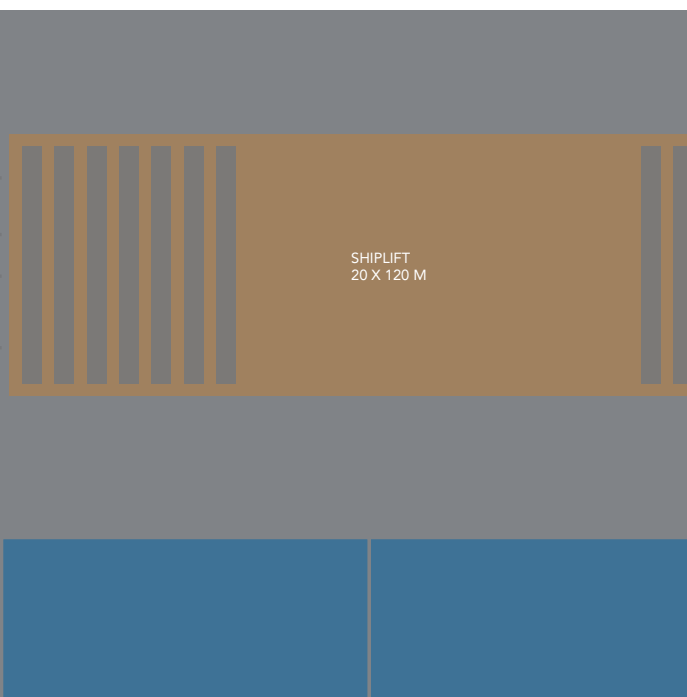

- Storage area
- Separate sub-contractor container park
- Customer and sub-contractor offices with access to Wi-Fi
- Canteen
- Workshops

DAMEN SHIPREPAIR & CONVERSION

WWW.DAMENSHIPREPAIR.COM

Damen Shiprepair & Conversion (DSC) offers a worldwide network of repair and conversion yards with dry docks up to 420 x 80 m.

We have specialists in every sector, ranging from offshore vessels and LNG carriers to fishing vessels and dredgers at locations in the Netherlands, Sweden, France, United Arab Emirates, South Africa and Singapore.

Each yard is individually managed by a dedicated team, but the DSC philosophy and brand is adopted at all yards, ensuring safety and reliability and providing the best quality at a competitive price.
